

# School Exclusion for **Unvaccinated** Students During a Measles Outbreak

Tyler is diagnosed with measles. This starts the 21-day exclusion period for unvaccinated and **exposed** students.

Fern is diagnosed with measles 10 days after Tyler. *Because she is now the most recent case, the 21 day exclusion period for unvaccinated and **exposed** students restarts.*

Carter is diagnosed with measles 12 days after student 2. *Because he is now the most recent case, the 21 day exclusion period for unvaccinated students restarts*

**Start exclusion period**

If no other cases are diagnosed, unvaccinated students may return to school (21 days later)

**exclusion period extended an additional (21 days after the most recent case)**

If no other cases are diagnosed unvaccinated students may return to school (21 days later)

**exclusion period extended an additional (21 days after the most recent case)**

21 Day exclusion starts for **everyone** below

Tyler

Unvaccinated students exposed to Tyler

Fern

Unvaccinated students exposed to Tyler

Unvaccinated students exposed to Fern

**Unvaccinated Exposed Students**

Every time a new student is diagnosed with measles, unvaccinated students will start their 21 day exclusion period over. An outbreak at school can cause unvaccinated students to be excluded for weeks or even months.
