

Paper Candy Cane

Ornament Size: 3-7 inches

Skill Level: Beginner-Intermediate

Supplies needed:

- White paper
- Scissors
- Scotch Tape
- Markers

Instructions:

1. Square up your piece of paper. Any white paper will do. I just use printer paper.
2. Now, grab a few markers, and make a few straight lines down one side of the paper and a few straight lines across the bottom. No need to be too picky about the lines being perfectly straight.
3. Once you've drawn 3 or 4 lines, turn your paper over.
4. Starting at the blank corner, roll the paper diagonally to the opposite corner.
TIP: Kids might find it easier to roll the paper up around a pencil. Just let the pencil drop out after taping the end of the candy cane.
5. When you get to the end, secure with a small piece of tape.
6. To curve your paper candy cane, simply wrap one end around something like a chunky marker or even your finger.
7. Finish by trimming each end of the candy cane with scissors to make a straight cut edge.
